

Lowenstein Sandler's Cybersecurity Awareness Series

AI Is Speeding Up Cyber Risk. Can Your Company Keep Up?

By [Amy S. Mushahwar](#)

OCTOBER 2026

Amy S. Mushahwar:

You likely have old security vulnerabilities that are within your systems for years that have been risk assessed as low and medium vulnerability risk.

That patch debt is rearing its head with modern frontier AI models, and it is easier for attackers to hopscotch through medium and low vulnerabilities to get into your environments. So even before we think about the speed of the newly detected vulnerabilities, we really want to make sure that you're addressing patch debt first.

If your security department is asking for more staffing because of vulnerability management, it is a real concern that general counsels need to listen to.

You may not, as an organization, be able to meet your 15 or your 30-day critical and severe patch windows.

Make sure that you are dedicating sufficient resources to patching on your security and IT teams, and you are documenting that.

That is evidencing reasonable security under difficult circumstances, which we want our clients to do.
